

Scope of works

Beatties were contracted to install the fire alarm, access control and intruder alarm system throughout the centre.

Overview

Beatties worked alongside Trinity fire and security to install all systems outlined in the scope of works.

These systems involved the wiring of over 250 fire alarm devices, 63 door sets with full access control, 60 intruder devices and the installation of 50 meters of high level aspirating pipework.

National Maritime Systems Centre

LOCATION: Portsmouth
CLIENT: Trinity Fire & Security

In addition to this, the building consisted of 7 rooms that required wiring to allow for standalone fire alarm systems and full gas suppression.

The works were completed over a 7 month period with a team of up to 7 electricians who required security clearance in order to work on a MOD site.

All works were installed, tested and commissioned on time with no delays.
