

Scope of works

As part of a comprehensive refurbishment project at Havant Fire Station, Beatties were appointed to deliver the complete Mechanical and Electrical package. The objective was to modernise the station's infrastructure, improve energy efficiency, and enhance safety and operational performance.

Overview

Beatties' works included:

- Complete Mechanical and Electrical Installation tailored to the operational demands of a working fire station.
- Ventilation System and Controls. Installation of a full mechanical ventilation system, with advanced control systems.
- Low Temperature Hot Water Pipework Installation.
- New Lighting Installation. Energy-efficient LED lighting was installed throughout the facility.
